SUMMARY

Trainee AWS DevOps Engineer with foundational expertise in cloud infrastructure and CI/CD pipeline automation. Proficient in utilizing core AWS services (EC2, S3, RDS, IAM) and containerization tools like Docker and Kubernetes. Hands-on experience implementing secure access, backup strategies, and automating workflows using Jenkins, Python, and Shell Scripting. Committed to building reliable and scalable solutions.

EDUCATION

Parvatibai Genba Moze College Of Engineering , BE in IT	2021–2025
• CGPA: 7.29/10	
Pemraj Sarda College (HSC)	2020–2021
• Percentage: 77.00%	
Sadhvi Preetisudhaji English Medium School (SSC)	2018–2019
• Percentage: 78.60%	

SKILLS

- **Cloud & Infrastructure:** AWS (EC2, S3, RDS, VPC, IAM, CloudWatch), Linux (Administration), Networking Fundamentals, Docker, Kubernetes
- **Configuration & Automation:** Python, Shell Scripting
- **CI/CD & Version Control:** Git, GitHub, GitLab, Jenkins
- **Monitoring & Logging:** Prometheus, Grafana, CloudWatch
- **Databases & Querying:** MySQL, SQL (Structured Query Language)
- **Soft Skills:** Leadership, Problem-Solving, Communication, Team Collaboration

WORK EXPERIENCE

- | | |
|--|---------------------|
| Trainee AWS Cloud Engineer — Cravita Technologies, Pune | Jan 2025 – Aug 2025 |
|--|---------------------|
- During my tenure at Cravita Technologies, I contributed to the implementation of streamlined CI/CD workflows by automating deployment pipelines using Jenkins. A key responsibility included configuring AWS IAM roles and policies to establish and maintain robust, secure access control across all cloud resources. I actively participated in system monitoring and optimization using AWS CloudWatch for proactive troubleshooting. Furthermore, I gained practical experience managing core infrastructure, including EC2 instances and security groups for high availability, and played a role in implementing backup and disaster recovery strategies utilizing AWS S3.

PROJECTS

- Deploying Secure and Scalable Three-Tier Architecture Using AWS**
 - Designed and implemented a highly scalable and fault-tolerant three-tier architecture on AWS, leveraging EC2 Auto Scaling for the compute layer, Amazon RDS Multi-AZ for the data layer, and Amazon S3 for secure, durable storage and backups.
- Web Application Deployment using Jenkins on AWS**
 - Containerized a Python Flask application using Docker to ensure deployment consistency and portability across environments. Deployed the application to an AWS EC2 instance via SSH, configuring the instance and security groups to make the containerized application accessible via its public IP address.
- CI/CD Pipeline with Jenkins and GitHub**
 - Engineered a Continuous Integration/Continuous Deployment (CI/CD) pipeline using Jenkins integrated with GitHub to automate the build, test, and deployment process upon every code commit. Utilized Docker to containerize the application and ensure consistent, rapid deployment across environments.

CERTIFICATIONS

Master in Cloud Architecture (AWS + DevOps).
